OPERATING INSTRUCTIONS FOR PIZZA KETTLE

WARNING!

This grill becomes EXTREMELY hot! Use caution working around the grill. The handles will become warm to hot over extended use. Use mittens or oven gloves when removing the lid, pizza ring, cooking grate or the pizza stone.

STEP 1: START THE CHARCOAL

Remove the lid, pizza ring and cooking grate. Pour desired amount of charcoal (3-5 lbs.) on the charcoal grate and light. Make sure ash catcher vent is open full. Leave cooking grate, lid, pizza ring off. The coals should be gray after about 30 minutes.

STEP 2: SETUP THE COALS

Carefully push the gray coals to the backside of the firebowl using a metal spatula or some other tool.

The coals should be stacked slightly on the firebowl backside. Make sure no coals are left on the front half of the charcoal grate.

STEP 3: SETUP WOOD CHunks

Carefully add 1-2 handfuls of charcoal on top of gray coals. Space evenly.

Carefully place 6-12 pieces of wood chunks directly on the coals. Arrange so the chunks rest against the firebowl and the shape will be a circular.

This will create the unique airflow and heat setup for the extreme heat.
This grill becomes EXTREMELY hot! Use caution working around the grill. The handles will become warm to hot over extended use. Use mittens or oven gloves when removing the lid, pizza ring, cooking grate or the pizza stone.

**STEP 4: SETUP FOR PIZZA**

Place the cooking grate on the grill. Very carefully place the pizza stone on the cooking grate at the front of the grill. The position of the stone is critical and should be no further than 1 inch from the front edge. Place the pizza ring and lid on the grill.

In this setup, the stone will be heated from the bottom and from the top with the super heated air flowing over and out the pizza ring opening.

**STEP 5: TEMPERATURES**

Once the lid is placed on the grill, the temperature will quickly rise. The temperature range for cooking pizza is 550-700°F. The hotter the temperature, the faster the pizza will cook. The temperature will usually climb to the 600-700°F range at first and then start to taper down.

WARNING! This grill becomes EXTREMELY hot! Use caution working around the grill. The handles will become warm to hot over extended use. Use mittens or oven gloves when removing the lid, pizza ring, cooking grate or the pizza stone.

STEP 6: COOKING PIZZA
Add pizzas to the grill through the opening in the pizza ring. Lightly flour the pizza peel so the pizza will slide off easier. Scoop up the pizza with the peel and place it on the stone using a quick back and forth motion.

STEP 7: ROTATING PIZZA
After a few minutes, the pizza will need to be turned 180 degrees. Use the pizza peel. The hotter the fire, the quicker it will cook.

If you have no experience, there will be some trial and error until your method is mastered. Temperature and the type of pizza (thin or thick crust, amount of toppings) being cooked will determine cook times. Experiment and have fun!
OPERATING INSTRUCTIONS FOR CHARCOAL GRILL

WARNING!
This grill becomes EXTREMELY hot! Use caution working around the grill. The handles will become warm to hot over extended use. Use mittens or oven gloves when removing the lid and cooking grate.

STEP 1: START THE CHARCOAL
Remove the lid, pizza ring and cooking grate. Pour desired amount of charcoal (3-5 lbs.) on the charcoal grate and light. Make sure ash catcher vent is open full. Leave cooking grate, lid, pizza ring off. The coals should be gray after about 30 minutes.

STEP 2: SETUP TO GRILL
Place the cooking grate on the grill. Place lid on grill and adjust lid vent as needed. When the charcoal has turned gray, the grill is ready.
**CLEANUP**

*GRILL CLEANUP*

Clean the cooking grate using a good quality grill brush. The buildup is easier to clean when it’s still hot. After the grill has cooled, tap and shake the grill lightly to get the ashes to fall into the ash catcher. If necessary remove the cooking grate and charcoal grate to push down any remaining ash or grill leftovers. Remove the ash catcher and dispose of cooled ashes in proper receptacle.

The chrome plated and enamel surfaces can be cleaned with soap and water. Clean only when the grill is cool to the touch.

*PIZZA STONE*

After just one use the pizza stone will become darkened with spots and stains. This is normal! The appearance may look unsightly but it has no effect on the performance or taste of the food.

After each use, clean the stone of loose food with the pizza peel or a tool. Do not gouge the stone, just lightly scrape the surface. The stone can be cleaned with water if desired. Allow stone to dry completely before using.

Do not use soap or chemicals as they will be absorbed by the stone.
FOOD TEMPERATURES

If you are unsure about when food is done, use this chart as a guide for measuring properly cooked meat temperatures.

Use a high quality meat thermometer with probe to measure the meat temperature. Push probe into the thickest part of the meat to get an accurate measurement. The temperature gauge on the grill measures the air temperature of the grill cooking chamber, not the food temperature.
